

Top 10 Products by Sales

Data Analytics Track | Task 19 | Level 1, Day 19

Prepared by: Akshat Srivastava | Internship at Veda Technology

Overview

This report identifies the top 10 best-selling products from the Superstore dataset, based on total sales value. The goal of this task was to practice ranking and sorting techniques using Python and Pandas, and to present the findings through a clear table and supporting visualizations.

Methodology

- Loaded the Superstore dataset into a Pandas DataFrame.
- Grouped records by Product Name and aggregated total Sales.
- Sorted the results in descending order to identify the top performers.
- Checked for tied sales values using the rank() function.
- Visualized the results using a bar chart and a category-wise pie chart.

Top 10 Products Table

Rank	Product Name	Total Sales (\$)
1	Konica Copier	227,102.96
2	Canon Copier	204,882.49
3	Belkin Cable	142,961.36
4	Logitech Mouse	139,916.73
5	Lexmark Printer	119,705.24
6	HP Printer	95,638.96
7	Kensington Keyboard	90,096.91
8	Apple iPhone	88,133.07
9	Cubify Printer	87,692.03
10	Samsung Galaxy	83,503.75

Sales Distribution Chart

Sales Share by Category

Key Insights

- Konica Copier recorded the highest total sales, followed closely by Canon Copier.
- Technology products (Copiers, Printers, Mouse, Keyboard, Phones) dominate the top 10 list, indicating this category generates the highest revenue per unit.
- No exact ties were found among the top 10 rankings.

- High-value items outperform high-volume but lower-priced office supplies in total sales, showing that price per unit plays a bigger role than quantity sold.

Conclusion

Technology products, particularly copiers and printers, are the biggest contributors to overall sales in the Superstore dataset. Focusing marketing efforts and inventory planning on these high-value items could help further improve total revenue.
